Website Health & Readiness Report · Prepared 11 July 2026

OVERALL: STRONG & STABLE — READY TO OPEN AFTER THE FINAL PAYMENT SETUP

The website is well built, fast, secure, and works on every device. A short list of owner setup items (below) is all that stands between it and taking real orders.

In plain words

The online store was given a thorough, independent check-up — its pages, shopping cart, checkout, customer accounts, security, speed and appearance on phones and computers. The result is very good. During the review we also found and fixed two important hidden problems (explained below) before any customer could ever be affected. Everything that can be tested without your payment account has been tested and passes.

Readiness scorecard

Area	Status
Security & customer-data protection	Excellent
Works on phone, tablet & computer	Excellent
Loading speed	Excellent on computer, Good on phone
Products, prices & photos	Correct & clear (2 products, Rs. 279)
Shopping cart & checkout	Working & safe
Customer accounts & Google sign-in	Working
Google-search readiness	Excellent
Payment system	Built & safe — needs final keys connected
Order-confirmation emails	Ready — needs email service connected
Store policy pages	Not yet written — content needed from you

What was recently checked & improved

- **Closed a serious payment loophole.** We found a hidden gap that could have let someone place an order marked as 'paid' without actually paying. It is now fixed and re-tested.
- **Fixed a sign-up bug.** Some customers could not create an account; that is now resolved.
- **Connected the store's database** so orders, accounts and the cart all work together reliably.
- **Made sure prices are correct and trustworthy.** Prices are always calculated by the secure server, so they can never be tampered with from a customer's browser.
- **Confirmed customer privacy.** No customer can ever see another customer's details, orders or address.
- **Fixed the disappearing mouse pointer** and tidied the product pages, photos and product names.
- **Tested on real browsers and phones** (iPhone, Android, tablet, Chrome, Safari) — all pass, with top marks for accessibility and search-engine readiness.

What is needed before opening to customers

These are simple setup and content items — none are website faults:

- **Connect the payment keys** (Razorpay) and run one test payment. About 10 minutes.
- **Provide the store policies** — Shipping, Refund & Cancellation, Privacy, Terms and Contact details. These are required by the payment provider and by law.
- **Connect the order-confirmation email** service so customers get a receipt.
- **Share the Rose pouch photo** so it can be added to the Rose product gallery.
- **Go live** — once the above are in, the updated website is published and can accept orders.

Bottom line: the website itself is in excellent, stable shape and has been independently verified. The remaining steps are quick owner setup tasks, after which it is ready to safely accept its first customers. A detailed technical record is kept with the project for reference.
